AURAPLAYER
BE AGILE, GET CONNECTED, GO MOBILE

The Secret to Oracle EBS Mobilization & Automation

Have you made a substantial investment of money, time, and resources in developing your Oracle systems that are now outdated as they are not available 24/7 from any device? Meet AuraPlayer - risk free modernization of Oracle EBS.

AuraPlayer is a unique, patented solution that modernizes existing Oracle applications without breaking the bank or risking production environments. Using a tool simple enough for business users, existing back-office systems are transformed into services/REST APIs, making the world of mobile/web immediately available. Additionally, all business logic, validations, and triggers locked in the current system are fired from the new application, without migration or re-development of the original application.

Why AuraPlayer?

User Friendly
Build future-proof mobile apps in record time with a tool simple enough for even business users.

Ensure Stability
No intrusive production installations, configurations or back-end redevelopment, ensuring system consistency and reliability.

Time to Market
Capture Oracle workflows in record time, making them immediately available for mobile/web.

Automation
Performs automation on the application layer without screen scraping. Ensures Services will be immune to changes that occur in the back-end.

Cost Effective
No need to redevelop or migrate the existing system nor create new DataBase API's. In addition as AuraPlayer simply wraps the existing system there is no lengthy QA process.

Low / No Risk
Without converting the entire application, extend specific business flows as needed - grow as you go. Providing agility, security, and flexibility to your digital transformation.

Not sure where to start?

Pick a common "Back-Office to Mobile" use case below or design a custom workflow from your existing system, then talk to us to achieve a mobile-first user experience.

Payslip

Give your employees the flexibility and agility they need by providing full access to pay stub information on the go.

Expense Reporting

Simplify and streamline your organization's expense reporting as a mobile-first application to log expenses anytime, anywhere.

Inventory Transfer

Manage your inventory directly from the warehouse floor by performing transfers, ship confirm, etc. with a flexible mobile application.

Sales Order

Arm your sales team with inventory and product information when and where they need it in the field, directly from your Oracle EBS system.

"The Ship Confirm process is one of the most complex processes in our business. By leveraging AuraPlayer, we delivered Mobile App functionality to the business and reduced a huge development and testing effort. We are now expanding our mobile development in many other functional areas such as EAM, Packaging and Mobile tracking, etc. and delivering them in a short time."

– Sudhakar Pochiraju, Application Development Manager, Worthington Steel
